

Install App Template = treba da go referencirate apps.py -> config imeto

```
'<appname>.apps.AppConfig',
```

In Models to view the names and values:

```
def __str__(self):  
    return self.ime
```

OR

```
def __str__(self):  
    return f"{self.ime} - {self.opis}"
```

**Forms** file se kreira vo appot (kade sto ima admin, views, models)

Model include all =

```
class ShowForm(forms.ModelForm):  
    class Meta:  
        model = Show  
        fields = '__all__'
```

**templates** folderot e kreiran na isto nivo so admin/apps/views/models

**view.py** FORM WORK

```
def kreiraj_oglas(request):  
    if request.method == 'POST':  
        form = OglasFrom(request.POST, request.FILES)  
        if form.is_valid():  
            form.save()  
            return redirect('index')  
    else:  
        form = OglasFrom()  
    return render(request, 'kreiraj_oglas.html', {'form': form})
```

INDEX WORK in views.py:

```
def index(request):
    shows = Show.objects.all()
    return render(request, 'index.html', {'shows': shows})
```

URLS.PY WORKS

```
from django.contrib import admin
from django.urls import path
from django.conf import settings
from django.conf.urls.static import static

from OglasApp.views import *

urlpatterns = [
    path('admin/', admin.site.urls),
    path('', index, name='index'),
    path('kreirajoglas/', kreiraj_oglas, name='kreirajoglas'),
    path('details/<int:id>/', details, name='details'),
]+ static(settings.MEDIA_URL, document_root=settings.MEDIA_ROOT)
```

Index.html Cards

```
<div class="row row-cols-1 row-cols-md-3 g-4" style="margin: 20px">

    {% for oglas in oglas_i %}
    <div class="col">
        <div class="card h-100">
            
            <div class="card-body">
                <h5 class="card-title">{{oglas.naslov}}</h5>
                <p class="card-text">{{oglas.opis}}</p>
            </div>
            <div class="card-footer">
                <a href="/details/{{oglas.id}}" class="btn
btn-primary">Details</a>
            </div>
        </div>
    </div>
    {% endfor %}

</div>
```

When clicked on details it goes to details.html

Details.html (everything works because of the views.py)

```
<body>
  <h1>{{ oglas.naslov }}</h1>
  <p>{{ oglas.opis }}</p>
  <p>Price: {{ oglas.cena }}</p>
  <!-- Add more fields as necessary -->
</body>
```
